In the past this bibliography has not contained papers which have been published in *Archaeometry*; however not all TL and ESR researchers have easy access to this journal and for this reason I list papers of interest for the last 3 years.

Compiled by Ann Wintle

Erratum

Mark Readhead has asked that in his paper,

Readhead, M.L. (1987) Thermoluminescence dose rate data and dating equations for the case of disequilibrium in the decay series. *Nuclear Tracks and Radiation Measurements*, **13**, 197-207,

readers should note the following error: the figure 9.75 in the second last line of equation 69 should be 19.75.

Editorial

• Unfortunately there has been a knock-on effect in the late publication of Ancient TL this year, resulting from the shortage of articles and delays in reviewing caused by the UK postal strike. Completion of reviewing permitting, issue 6(iii) will be mailed during December - it will also include issue 2 of the Date List.

• I am pleased to announce that a new "column" concerned with computing matters is to start in *Ancient TL.*, and it will be produced jointly by Dave Huntley and Ed Haskell. They describe the scope of this new section below:

"*Ancient TL Computing* is a new feature of *Ancient TL* created with the aim of stimulating dialogue and distributing information on the uses of microcomputers in TL and optical dating research. Topics to be covered could include off-the-shelf add-in boards, peripherals, custom circuits, software, data base structures, techniques and tips, as well as answers (hopefully) to your computing questions. The format is open, and for the column to achieve its stated purpose, response from you, the reader, is needed. We will accept anything from one-liners to longish articles(*), the criterion being interest to readers. We hope that in some cases contributors will be willing to provide more detailed information (plans, schematics etc.) to readers on an individual basis if

requested. Please send your contributions, questions and suggestions to E.H. or D.J.H. Specifically Macintosh applications should be sent to E.H. and specifically PC applications should be sent to D.J.H."

Addresses:

Dave Huntley - see review article.
Ed Haskell, TL Laboratory, Radiobiology,
Building 351, University of Utah, Salt Lake
City, Utah 84112, USA.

(* *Ed. note: articles of length comparable with those previously published in AnTL should be submitted in the usual manner.*)

Suggestions for other types of column are welcomed.

• I understand that you will have more success in sending messages to me using the address:

Ian_Bailiff@UK.AC.DURHAM

rather than using the one given in AnTL 6(i).

We are finding that our use of electronic mail and FAX systems for communications with other laboratories is steadily increasing. If there is sufficient interest, a directory of FAX/email addresses could be included in a future issue of Ancient TL, or made available on request (please forward details if interested).

POSITION AVAILABLE

Post-doctoral Fellowship

A post-doctoral fellowship is available at McMaster University, Hamilton, Ontario, Canada, for research on ESR dating of tooth enamel and other materials from archaeological sites. Experience in TL or ESR would be useful, but not essential. For further information please contact:

H.P. Schwarcz
Department of Geology
McMaster University
Hamilton
Ontario
Canada LS8 4M1

tel. 416-525-9140 ext.4186.
