

## List of consideration

- 1 What should the Name of the society be?
- 2 What is the Mission of the Society (e.g. to promote luminescence and ESR in other fields, committee that can lead discussions in our community?)
- 3 What is the academic Scope of the Society? (presumably it should include both luminescence and ESR dating, what other allied subjects should it include?)
- 4 What are the Duties of the society? (e.g. support new laboratories, oversee organisation of the scientific and administrative part of LED meetings, organise laboratory inter-comparisons?)
- 5 What should the Structure of the society be? (one steering committee with president, vice-president, treasurer?)
- 6 How should the Administration of the society be undertaken? (election process for steering committee, frequency of elections (every three years at LED?), total number of board members, max number of members per country, how to vote on important matters..., annual meeting by steering committee?, ...)
- 7 What Financial arrangements should be put in place? (should there be membership fees, accounting year, etc...)
- 8 What means of dissemination should the Society use? (e.g. website, Newsletter, should Ancient TL become the official journal of the Association?)
- 9 What other functions should the Society undertake? (organise student prizes, medals? ...)
- 10 Other issues that we have not addressed here?)
